

Skilled Labor Forum

“U.S. employers are finding it increasingly difficult to find skilled workers.”

The National Association for Business

Over 60% of the Skilled Labor force is over 45 years old.

Skilled Labor Careers:

- ❖ Precision Machining
- ❖ Optics
- ❖ Electrician
- ❖ Plumbing & Pipefitting
- ❖ HVAC
- ❖ And many, many more

Skilled workers not only work with their hands to build, fix, or install something, there is also a significant amount of brainpower required to do most jobs. Skilled workers must be computer literate as many machines use computer programs to operate. You must have good math and reading skills in order to calculate, measure and read blueprints accurately. Innovative advances in technology have enabled skilled workers to empower the use of robotics and lasers with their trade.
