# Data Security and Privacy Plan

This document outlines SchoolLinks Data Security and Privacy Plan. Protocols and procedures might change based on industry best practices.

## Data Security

SchoolLinks follows guidelines and best practices set forth by the Open Web Application Security Project (OWASP) to ensure that our application and infrastructure are secure.

Security measures include, but are not limited to VPN-only access of data and infrastructure, restriction of access by IP address, password protection with stringent complexity requirements, regular password rotation, regular access key rotation, and two-factor authentication. SchoolLinks' data is encrypted at rest and in transmission and all user-data is transmitted via TLS-secured connections. We maintain rate-limiting and lock-out mechanisms to protect against brute force attacks.

SchoolLinks uses Amazon Web Services (AWS), which has industry-leading security practices, for infrastructure hosting. Where possible, SchoolLinks leverages AWS's managed services instead of stand-alone cloud server instances. This dramatically lowers the risk-profile and decreases the potential attack surfaces. When SchoolLinks does spin up and use general-purpose servers on AWS, SchoolLinks follows all of the latest and best practices and has DevOps engineers with extensive experience who are responsible for configuration and management of these servers.

SchoolLinks undergoes security audits and penetration tests by third-party providers to ensure the security of the application and service offerings. SchoolLinks keeps all software packages and dependencies up to date with the latest versions to ensure access to all security patches.

When interchanging student data with districts, SchoolLinks does not allow sending of data through email and instead interchange data through secure APIs or an SFTP server that SchoolLinks maintains for secure data interchange with its partners. SchoolLinks communicates with its district partners about best practices to prevent any social engineering or phishing attacks.

## How we ensure information privacy

SchoolLinks never sells or provides any student or district data to third parties.

SchoolLinks restricts internal access to and usage of data. SchoolLinks does not use it for

internal development or testing purposes. Only select individuals within the company who deal directly with the support of a particular account can view and access its data. SchoolLinks has both application-level restrictions and safeguards and internal policies to prevent unauthorized internal access to this data for purposes other than support and troubleshooting.

When SchoolLinks needs to conduct analytics studies of usage of the platform, SchoolLinks only uses anonymized, non-personally identifiable data.

Following the termination of a contract, SchoolLinks destroys all school district data from its system, in accordance with all state and federal regulations and/or district's data sharing agreement.
